

The FAA Safety Team presents:

Lessons Learned from NTSB General Aviation Accident Investigations

Interested in learning about the National Transportation Safety Board (NTSB); how accidents are investigated; and what can be done to improve general aviation (GA) safety? Participants will have the opportunity to interact with NTSB Board Member Earl Weener and NTSB staff to learn about the NTSB structure, mission, and investigative process. NTSB staff will present several case studies highlighting emerging and recurring safety issues in the GA community and will discuss lessons learned from general aviation aircraft accident investigations. Participants will have an opportunity to visit the NTSB laboratory and review cases and examine the associated wreckage. An additional benefit for attendees will include the discussion by NTSB staff of the accident investigation process for air carrier accidents, focusing on the TWA 800 investigation, followed by a walk through of the reconstruction. The objective of this seminar is to promote and facilitate dialog with the general aviation community in order to improve the safety of GA operations. Click on the link below to register today! See you there!

Directions: For driving directions, please see the "Additional Seminar Information".
